Applicant's election of the species of Figure 1 in the communication of 9/15/05 is acknowledged. A further combination/subcombination restriction is now being made and is found herebelow:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 23-27, drawn to a clamp system, classified in class 269, subclass 37.
- II. Claims 19-22, drawn to a clamp, classified in class 269, subclass 6.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination (ie., claim 1) does not require a clamp having a spring means or an aligning and strengthening means (ie., claim 19). The subcombination has separate utility such as a clamp to compress two objects during gluing whereby a gimbal mechanism is not required.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
